SKILLS

- **AIML**
- **C, C++**
- **DSA, DAA**
- **HTML, CSS, JavaScript**
- **Python**
- **DBMS, My SQL**
- **VHDL**
- **Mathematics**
- **Stock Market Analysis**

EDUCATION

- B.Tech in Computer Science | JK Lakshmipat University CGPA: 9.256| 2027
- XII (CBSE) | St. Edmund's School, Jaipur Percentage:90.0% | 2022
- X (CBSE) | St. Edmund's School, Jaipur Percentage: 90.4% | 2020

ACHIEVEMENTS

- Awarded **100% scholarship** by JK Lakshmipat University and have maintained it across all semesters.
- Featured in the **Dean's Honors List** every semester for outstanding academic performance.
- CodeChef Rating: 1316 amankaushal007

ACADEMIC PROJECTS

- **JKLU Feedback System**
  Developed a university feedback system for structured student reviews on courses, events, and workshops. It enables feedback submission, stores data in PostgreSQL, and provides insights for faculty improvement.
  Technologies Used: HTML, CSS, JavaScript, Java, PostgreSQL.

- **Triply – Group Travel Management App**
  Developed an all-in-one group travel management app during LNMIIT's LNM Hacks Hackathon, featuring real-time expense splitting, itinerary planning, and group chat for seamless collaboration.
  Technologies Used: HTML, CSS, JavaScript, Java, PostgreSQL

- **FPGA-based Music Player**

  Designed and implemented a digital music player on an FPGA board using the VHDL programming language. Features include audio playback from memory, basic user controls (play, pause, next, previous), and hardware-level signal handling for audio output.

  Platform: VHDL on FPGA

- **Speech Emotion Recognition System**

  Built a machine learning model to detect human emotions from speech data. The system extracts feature like MFCCs from audio signals and classifies emotions such as happy, sad, angry, and neutral using supervised learning algorithms.

  Platform: Python (scikit-learn, librosa)

- **Real-Time American Sign Language Recognition System**

  Developed a real-time ASL recognition system using Media Pipe hand landmarks and classical ML models. Built a custom dataset of 7200+ labelled images, extracted 42-D normalized features, and evaluated multiple classifiers. Random Forest achieved 94.21% accuracy and was deployed on Raspberry Pi 400 for real-time assistive applications.

  Platform: Python, Media Pipe, OpenCV, scikit-learn, Raspberry Pi

EXPERIENCE

- **Teaching Assistant (C Programming)**

  JK Lakshmipat University, Jaipur | Jan 2025 – May 2025 | On-site

  - Assisted first-year B. Tech students in C programming labs and tutorials.
  - Mentored and guided 100+ students in problem-solving and programming fundamentals.

- **Deep Learning Intern (LUSIP Program)**

  The LNM Institute of Information Technology, Jaipur | Jun 2025 – Aug 2025 |On-site

  - Worked on deploying deep learning models on embedded hardware (Raspberry Pi) for offline inference
  - Optimized models for low-power devices and explored real-time processing in resource-constrained environments.
  - Gained hands-on experience in model development and hardware integration under faculty supervision

- **Teaching Assistant (DSA Coding Contest)**

  JK Lakshmipat University, Jaipur | Aug 2025 – Dec 2025 | On-site

  - Assisted first- Organizing DSA coding contests for second-year B. Tech students.
  - Conducting problem-solving sessions to strengthen algorithmic thinking and coding skills.
